

Safety & Lab Tour

sign: _____ date: _____

lab_tour

Make each point where the object is. Every rule is attached to the thing it is about, so it lands while the viewer is looking at it. **Name every station out loud as you reach it** — a tour is entirely information carried by the picture, and anything unsaid is absent from the captions and invisible to a screen reader.

Red = say close to this wording; each maps onto a quiz question.

1 The door — the magnet

What the magnet means, and when you may and may not come in · Enter only when a supervisor — facilitator or instructor — is present · **“No food or drink anywhere in B144 — not even a capped water bottle”** · Only projects authorised by your instructor or PI · Nothing in or out unless explicitly authorised · **BSL1 only**. No infectious agents · **no sharps** · no hazardous chemicals · **“Evacuate to the Mining Circle” — show the route while you are at the door**

2 The three bays

What lives on the surfaces, and what lives in the drawers below · The **map on the wall**, and the same map online · Restore your bench to its default organisation after every session · Keep accurate records of all experiments as directed

3 Safety corner

Goggles, gloves, lab coats — all PPE lives here · Required at all times: closed-toe shoes and long pants · lab coat · gloves · eye protection · **“Prescription glasses count as eye protection”** · **EHS onboarding** — what it is, and that it is required · Safety shower · eye wash · fire extinguisher, all by the biohood-side door · **“Flush your eyes for fifteen minutes” — hold the shot on the eye wash** · You must know how to operate the extinguisher safely · Spill kit · first aid kit · Chemical Hygiene Plan with emergency information · Tell your supervisor **immediately** about any spill or injury; **911** if life-threatening · The printed **Lab Rules**; the full list is the posted PDF · **Do not pull the shower — point, say what it is for, move on**

4 Media bench & microwave

Microwave — superheated agar or liquids can burn you · **Training Required** — allowed only after the training; follow the QR on the sign · **Scan one QR on camera** so the mechanism is seen working · **Training Available** — scan it if you don't know how to use something · If in doubt, ask your supervisor before using anything

5 Gels, EtBr, imaging

⚠ **What EtBr is, where it is, who may handle it — left blank on purpose, see the note below** · The imaging devices and what they are for

6 PCR station

7 Miniprep / Zymo bench

8 Flex benches

9 Open bench

Research materials **including gloves** → large white bin or benchtop plastic beakers

10 Incubator & shaker

11 –80 freezer

“Supervisors Only means do not touch it” — this is the sign to say it at · Students must not touch or use it

12 Transformation bench

13 Chemical hood

Flame sterilization happens here — **supervisors only** · **Bunsen burner** — fire hazard, especially with ethanol-based solutions · **“Never spray ethanol near an open flame”** · Point at the Supervisors Only signage again here

14 Sterile bench

Close on: follow University policies, including COVID-19 mitigation and emergency response · breaking these rules can cost lab access. | **Also:** film when the room is quiet; anyone incidentally on camera should know they are being filmed; say the slug aloud as you hold up the card, so the transcript segments itself. | **EtBr:** [safety.md](#) says BSL1 with no hazardous chemicals, and [gel.md](#)'s quiz says the premade gels hold no carcinogenic intercalating dye — so what belongs at that station is your wording, not mine.
