TAKE 1 – LAB_TOUR · ONE CONTINUOUS WALKING SHOT, QUIET ROOM

Name every location out loud as you reach it. A tour is entirely information carried by the picture; anything unsaid is absent from the captions and invisible to a screen reader.

1. **Entry.** Only enter when a supervisor is present.
2. **Safety Corner** – east wall, near the northeast corner, north side of the room, by the biosafety cabinets. **Slow down here.** Safety shower · eye wash · fire extinguisher · spill kit · first aid kit · Chemical Hygiene Plan binder and posted emergency numbers · PPE stock · the printed Lab Rules. **Say “fifteen minutes” at the eye wash and hold the shot.**
3. **Benches** – where students work; the default organisation they must restore.
4. **Electrophoresis bench** – gel rig drawer, 1× TAE, imager.
5. **Thermocyclers** – ProFlex.
6. **Freezers** – enzyme freezer, –20, –80. Point out the pink **Training1** box.
7. **Chemical hood** – flame sterilization happens here, supervisors only.
8. **Microwave.**
9. **Waste** – large white bin, benchtop plastic beakers.
10. **Exit route** – walk to the door and say evacuation goes to the **Mining Circle**. Keep walking outside and show it if you can.

TAKE 2 – BIOSAFETY · STATIC, AT A BENCH

Say these six close to the wording below. Each maps onto a quiz question.

“Flush your eyes for fifteen minutes”

“Evacuate to the Mining Circle”

“No food or drink anywhere in B144 – not even a capped water bottle”

“Never spray ethanol near an open flame”

“Prescription glasses count as eye protection”

“Supervisors Only means do not touch it”

CONDUCT

- Supervisor present; authorised projects only
- Nothing in or out
- **BSL1 only** – no infectious agents, sharps, or hazardous chemicals

PPE

- Closed-toe shoes, long pants, lab coat, gloves, eye protection
- Show one person correctly dressed, head to toe, in a single shot

SIGNAGE – THREE TIERS

- **Supervisors Only** – do not touch
- **Training Required** – only after training; scan the QR
- **Training Available** – scan if unsure
- **Scan one QR on camera** so the mechanism is seen working

HAZARDS · EMERGENCIES · CLEANUP

- Superheated agar and liquids in the microwave; burner fire risk
- Report every spill and injury immediately; 911 if life-threatening
- Restore the bench; gloves and waste to the white bin
- Violations cost lab access

ON THE DAY

- **Do not pull the safety shower.** Point at it, say what it is for, move on.
- Film when the room is quiet. Anyone incidentally on camera should know they are being filmed.
- Say each slug aloud as you hold up the card – it segments the transcript for you later.
