TAKE 1 – LAB TOUR · ONE CONTINUOUS WALKING SHOT, QUIET ROOM

Name every location out loud as you reach it. A tour is entirely information carried by the picture; anything unsaid is absent from the captions and invisible to a screen reader.

1. **Entry.** Only enter when a supervisor is present.
2. **Safety Corner** — by the north door, near the biosafety cabinets on the mammalian cell side. **Slow down here.** Safety shower · eye wash · fire extinguisher (all three **by the biohood-side door**) · spill kit · first aid kit · Chemical Hygiene Plan with emergency information · PPE stock · the printed **Lab Rules**, whose full list is the posted PDF. Say you must **know how to operate the extinguisher safely.** Say **“fifteen minutes” at the eye wash and hold the shot.**
3. **Benches** — where students work; the default organisation they must restore.
4. **Electrophoresis bench** — gel rig drawer, 1× TAE, imager.
5. **Thermocyclers** — ProFlex.
6. **Freezers** — enzyme freezer, -20, -80. Point out the pink **Training1** box.
7. **Chemical hood** — flame sterilization happens here, supervisors only.
8. **Microwave.**
9. **Waste** — large white bin, benchtop plastic beakers.
10. **Exit route** — walk to the door and say evacuation goes to the **Mining Circle**. Keep walking outside and show it if you can.

TAKE 2 – BIOSAFETY · STATIC, AT A BENCH

Say these six close to the wording below. Each maps onto a quiz question.

“Flush your eyes for fifteen minutes”

“Evacuate to the Mining Circle”

“No food or drink anywhere in B144 — not even a capped water bottle”

“Never spray ethanol near an open flame”

“Prescription glasses count as eye protection”

“Supervisors Only means do not touch it”

GENERAL CONDUCT

- No food or drink in the lab
- Enter only when a supervisor — facilitator or instructor — is present
- Only projects authorised by your instructor or PI
- No materials in or out unless explicitly authorised
- **BSL1 only.** No infectious agents · **no sharps** · no hazardous chemicals

PPE — REQUIRED AT ALL TIMES

- Closed-toe shoes and long pants · lab coat · gloves · eye protection
- Prescription glasses are acceptable eye protection
- PPE lives in the Safety Corner
- Show one person correctly dressed, head to toe, in a single shot

HAZARDS

- **Microwave** — superheated agar or liquids can burn you
- **Bunsen burner** — fire hazard, **especially with ethanol-based solutions**
- **Never spray ethanol near an open flame**

ON THE DAY

- **Do not pull the safety shower.** Point at it, say what it is for, move on.
- Film when the room is quiet. Anyone incidentally on camera should know they are being filmed.
- Say each slug aloud as you hold up the card — it segments the transcript for you later.

SIGNAGE — THREE TIERS

- **Supervisors Only** — students must not touch or use it
- **Training Required** — allowed only after the training; follow the QR on the sign
- **Training Available** — scan the QR if you don't know how to use it
- **If in doubt, ask your supervisor before using anything**
- **Scan one QR on camera** so the mechanism is seen working

EMERGENCIES

- Notify your supervisor **immediately** of any spill or injury
- **911** for life-threatening emergencies
- Evacuation goes to the **Mining Circle**

CLEANUP, RECORDS, COMPLIANCE

- Clean the bench and restore its default organisation after every session
- Research materials **including gloves** → large white bin or benchtop beakers
- **Keep accurate records** of all experiments as directed
- Follow University policies, including **COVID-19 mitigation** and emergency response
- Breaking these rules can cost lab access
